

GRIFFIN III & G3HYBRID

Griffin III is our flagship and head of the family, supporting up to 512 full-performance pins. Or consider the brother of the Griffin III, the G3 Hybrid, supporting a combination of DC pins and full-performance pins, up to 1,152 total channels. **HILEVEL's** Symphony software provides all the tools needed for vector translation, design verification, characterization, Failure Analysis, mixed signal, and full automation in C.

Curve Master™

The **HILEVEL** CurveMaster is a precision curve tracer with powerful high-precision DC parametric measurement tools. It includes internal DUT power supplies allowing for tests to be performed under power, across all 2,048 pins. Verify device authenticity using the Golden Pin feature, and do it all with our easy-to-learn GUI software.

DC³

For low-cost Production Test where only DC testing is needed, the **HILEVEL** Co-Optive DC³ can also be integrated with your own logic stimulus equipment to enable testing of output pins. Up to 2,048 channels supporting up to 64 sites in Multi-site mode.
